

The goal of the Research Training in Mental Health Epidemiology program is to provide rigorous training in the application of epidemiologic and statistical methods to psychosocial and psychiatric research. Formal training, mentorship, and extensive research experience will provide trainees with the requisite methodological and substantive tools to conduct high quality research in mental health. Providing exposure to diverse specialty areas both within and among the current program and other ongoing training initiatives will provide a broad perspective on the substantive areas of psychiatric research and appreciation for the need for a multidisciplinary approach that is critical to understanding pathogenesis and the impact of mental disorders.

For more information, please contact [Melanie Elliot](#).

PhD applicants applying to the program interested in this training program should indicate this in their personal statement. The application deadline for Fall 2010 admissions is December 15, 2009. Please apply at the [Graduate School of Arts and Sciences](#).
