Re: Submission of endometrial biopsies for the Endometrial Function Test[®] (EFT[®])

Dear Fellow Physician,

Thank you for your interest in the Endometrial Function Test[®] (EFT[®]), a service of the Reproductive and Placental Research Unit at the Yale University School of Medicine. Enclosed you will find an *EFT[®] Biopsy Submission Protocol* form with directions for our preferred collection procedures and fixation protocol. Instructions for mailing the endometrial biopsies can be found in the *Sending Biopsies to Yale University* form. Also, please find a *Request for EFT[®]* form which should be filled out and sent along with each biopsy.

Due to the recently instituted HIPAA regulations, we also ask that your patient complete our *EFT[®] HIPAA Patient Consent Form* and include it with the first biopsy you send us for each patient. **Unfortunately, we can not perform the EFT unless we receive a signed HIPAA form.**

Please be aware that specimens can only be received Monday through Friday. It generally will take a few days to have the tissue embedded and sectioned to have unstained slides prepared for immunohistochemistry. It is best to send biopsies in the beginning of the week to ensure that they will be included in the following week's staining. However, please adhere to the guidelines concerning appropriate cycle days for biopsy whenever possible. These guidelines are enclosed. We would prefer a specimen stay in fixative for a few days longer than have it collected at an inappropriate time of the cycle. You can batch mail biopsies from different patients if that is convenient for you. After we review the slides, we will generate a report, which will be emailed, mailed or faxed to the addresses you specify in the *Request for EFT[®]*.

An overview of the EFT, and the key markers behind it, can be found in our July 2003 article *Improved Endometrial Assessment Using Cyclin E and p27, Fertility and Sterility, 80: 146-56, 2003*. I will be happy to discuss with you our current understanding of the significance of the

Re: Submission of endometrial biopsies for the EFT®

results generated by any particular biopsy that you send us. You can also find additional information on our markers in the Infertility section of our web site which is listed in the letterhead above.

If you would like us to send you additional patient oriented articles, brochures and a movie on DVD describing the EFT®, please contact Kristin Milano at 203-785-7642 (kristin.milano@yale.edu).

Our routine protocol is to examine an H&E stained slide for standard dating and to evaluate each biopsy with a panel of markers. On cycle day 15 we routinely evaluate progesterone receptor (PR) and cyclins, while on cycle day 24 we evaluate cyclins only. Under certain circumstances, if the patient is known to be blood group A or AB, we may also examine MAG (mouse ascites glogi mucin epitope).

We require a payment of \$459.00 to be sent with each biopsy in the form of a money order or cashier's check made payable to **Yale University**. We also now accept credit card payments from  and  (see Request for EFT® form).

If you are concerned about the amount of tissue collected at the time of biopsy, please check the *H&E (\$50) to rule out Quantity Not Sufficient* check box. We will process the tissue and only examine the HE slide. If there is enough tissue to perform a full EFT, we will do so and charge the patient the remaining \$409 with their supplied credit card. If the specimen is inadequate we will not perform the EFT and the patient will not be charged anything beyond the initial \$50.

Please see the *EFT® Biopsy Submission Protocol* form for details concerning our recommended protocols for frequency and timing of endometrial biopsies for performance of our Endometrial Function Test® (EFT®). Shipping costs are the responsibility of the submitting physician or patient. Instructions can be found in the *Sending Biopsies to Yale University* form.

An *EFT® Quick Guide* is enclosed which summarizes the above information.

Thank you in advance for allowing us to examine your patient's endometrial biopsy and add these results to our growing clinical database. We look forward to working with you and your patients.

Yours truly,

/Harvey Kliman/
